

Using JSon Server

Complément cours

Install Json-server :

```
npm install json-server
```

Run Json-server to watch a file

```
Json-server --watch file-path (or npx json-server ....)
```

Fetch data

```
Fetch('endPointUrl').then(response => response.json()).then(data => var = data).catch(err => console.log(err)).
```

Add new ressource

```
fetch(endPointURI, {  
  method: 'POST',  
  headers: {'Content-Type': 'application/json'},  
  body: JSON_Object  
})
```

Update ressource

```
fetch(endPointUri, {  
  method: 'PATCH',  
  headers: {'Content-Type' : 'application/json'},  
  body: JSON_Object  
})
```

Delete ressource

```
fetch(endPointURI, {method: 'DELETE'})  
  .then(this.$emit('delete', this.project.id)) // we  
  .catch(err => console.log(err))
```
